

Dvalin template delivered on time

The Dvalin project reach a major hardware milestone as Aker Solutions deliver template on time.

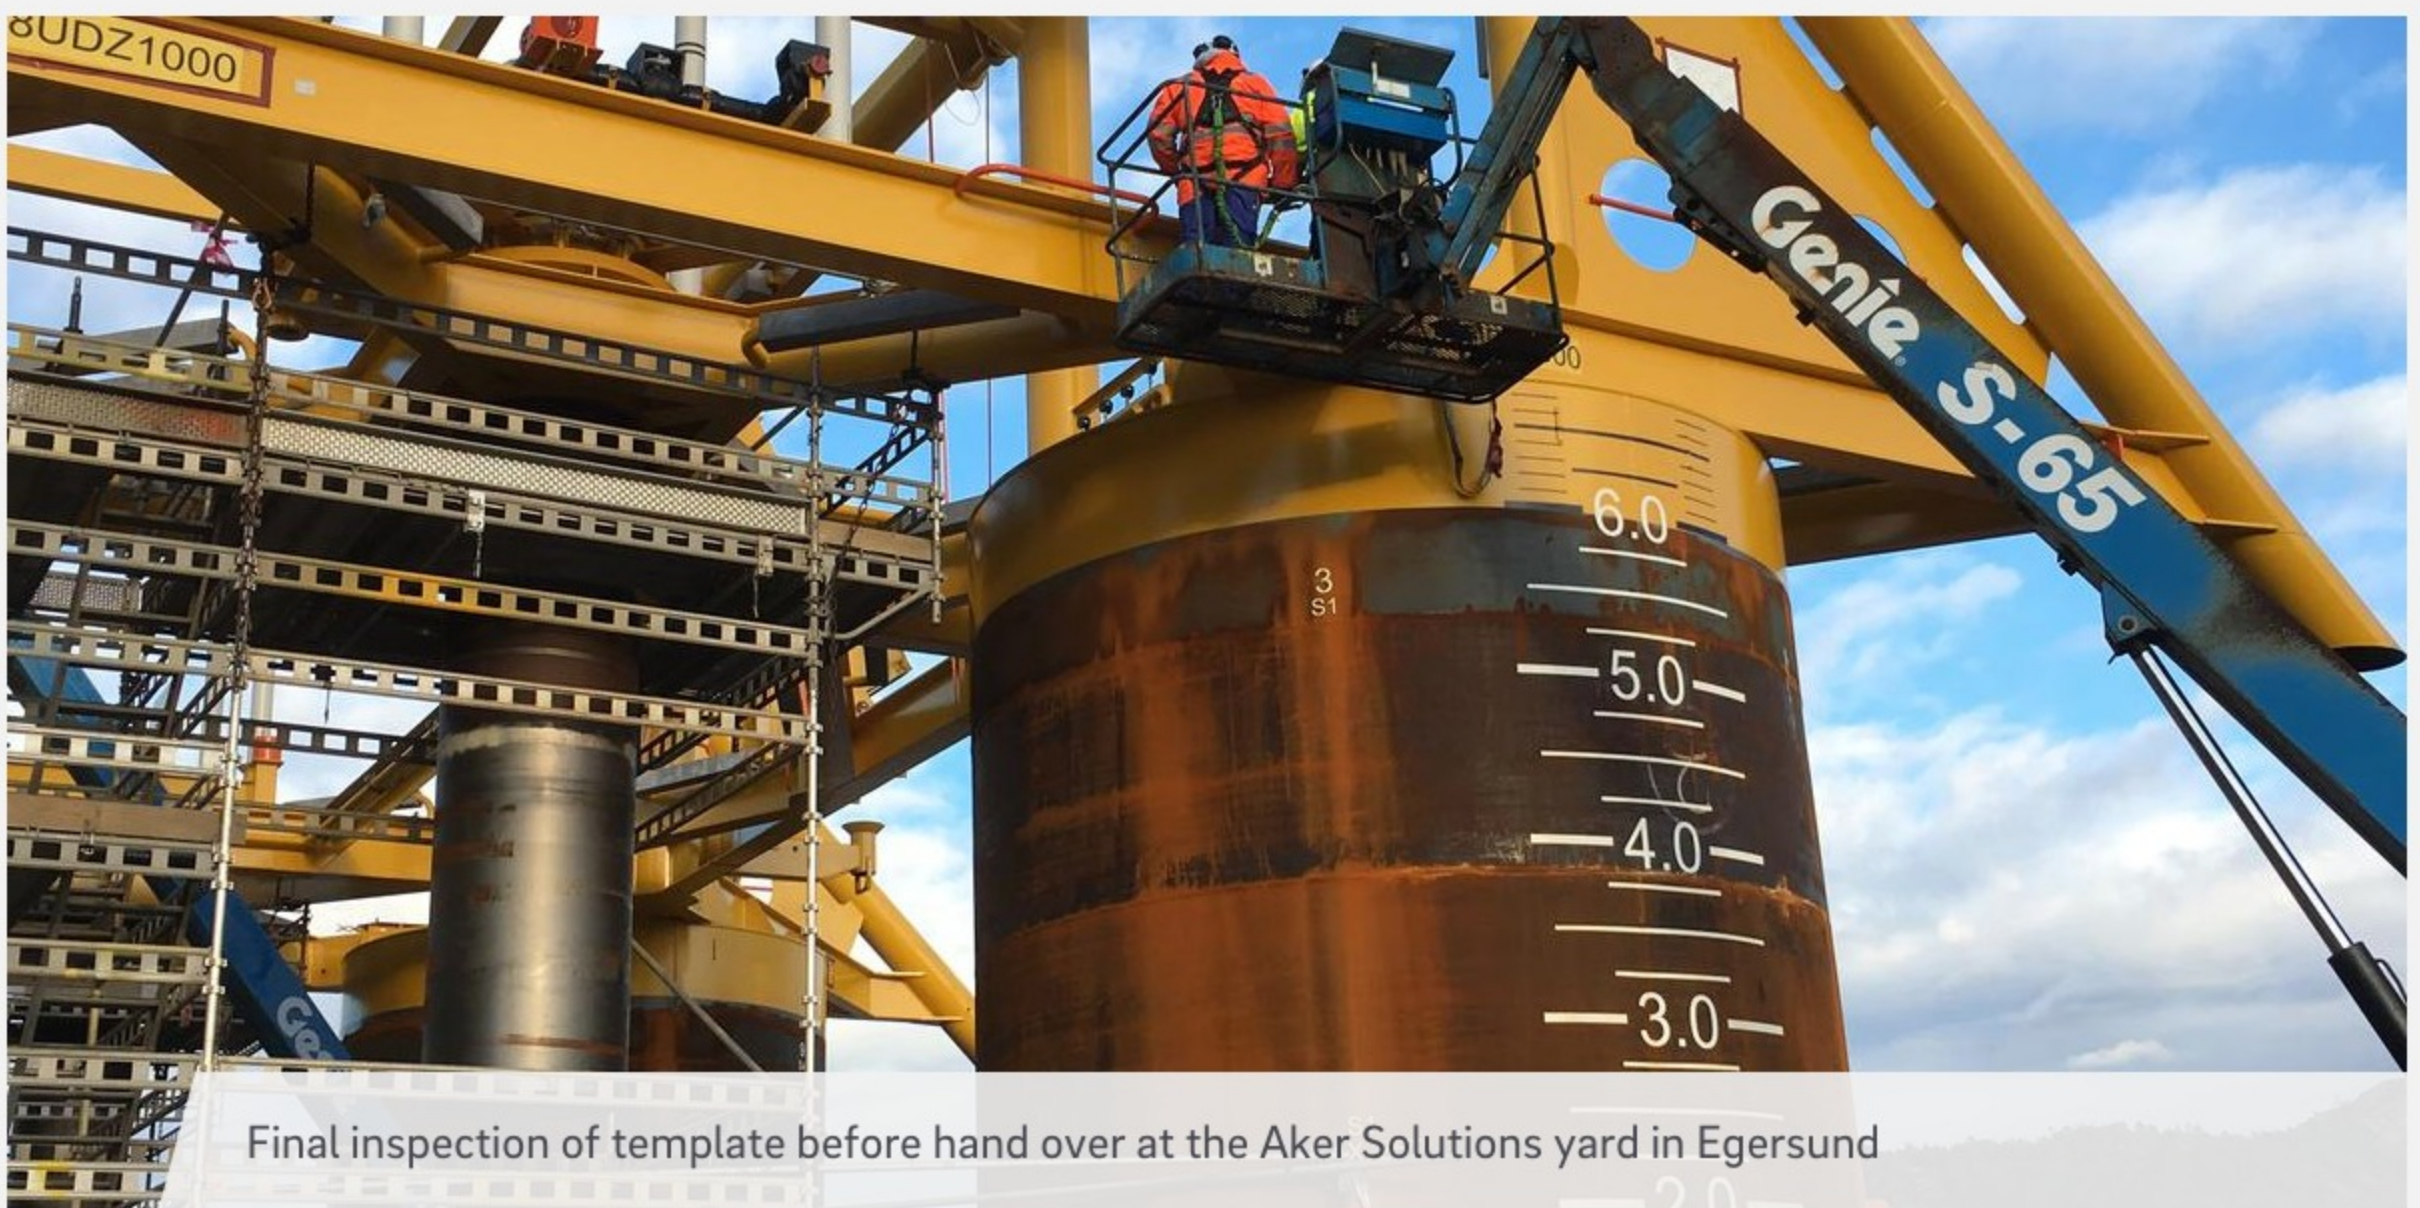

After 10 months of production at the Aker Solutions yard in Egersund, the template is handed over to DEA according to both time and budget.

The Dvalin project SPS Manager, Petter Øhlckers says:

“DEA is very pleased with the work performed by Aker Solutions, ensuring that the Integrated Template Structure (ITS) is delivered on time, in accordance with DEA’s specification and - most importantly - without any HSE incidents. For the Dvalin project this is the first major hardware milestone and an important step towards successful completion of the project”.

The ITS will be stored in Egersund until load out and installation on the Dvalin field by TechnipFMC, which is currently planned to take place in April 2018.

Aker Solutions in Egersund will continue the assembly work on the manifold module, which is on schedule for delivery in Q1 2019.

Final inspection of template before hand over at the Aker Solutions yard in Egersund
