

Dvalin module installed

LIFT: The 577 ton heavy H25 module on its way over to the Heidrun platform.

Six days after leaving the yard in Haugesund, the Dvalin H25 module is now installed on the Heidrun platform.

The actual lift from the heavy lift vessel S 7000, was performed in the early morning this Monday. Dvalin Topsides Manager Roy Padgett reports:

"I have to thank everyone involved for making this a very smooth and safe operation. Everything went according to plan – even the weather was excellent. The H25 module installation is a huge milestone for the project", he says

The H25 module is a MEG and Methanol utility module to the main process module M40. The M40 module is currently under construction at the Aibel yard in Haugesund.

The Dvalin project.
